

15. How to create users and try to login

To Create any user, we have to do below steps,

1. Select Users and Groups > Manage Users.
2. First search for the user to verify whether the user exists in any user registry by using the Search for Users UI controls.
3. If the user does not exist, click Create.
4. Enter the details for the user, such as, the user ID, first and last names, e-mail address, password, and any group membership.
5. Click Create.
6. Click Create Like to create another user as outlined in step 6; otherwise, click Close.

Search for Users

Search by * Search for * Maximum results
